Analytical Rationale

Spice Route Kitchens — Area Manager Dashboard & VP Operations Weekly Brief

Area Managers — **Live Dashboard**

VP Operations — **Weekly Brief**

1. Priorities and exclusions

For **Area Managers**, I prioritised three operational questions: **Did scheduled work occur? Where are unresolved operational issues concentrated? Which outlets require intervention?**

The dashboard therefore combines scheduled-work completion, compliance, ticket backlog and outlet-level prioritisation, with drill-down capability for investigation.

I deliberately **excluded ad-hoc forms** (Kitchen Equipment Audit, Store Issue Report) from completion-rate KPIs. The brief states these have no fixed schedule, so treating non-submission as failure would misrepresent execution quality.

For **leadership**, I focused on recurring outlet underperformance, ageing ticket backlog and issue patterns — not individual staff metrics or unsupported causal claims. The report is designed to prioritise management action rather than provide a descriptive status summary.

2. Dashboard tool selection

Why Looker Studio rather than a static report?

Area Managers require daily monitoring and outlet-level drill-down, which a static PDF cannot provide efficiently. Looker Studio provides a shareable interactive presentation layer, date and outlet controls, and drill-down visibility — without requiring a paid dashboard platform or additional infrastructure.

Design principle: the dashboard is for **daily monitoring and investigation**; the recurring report is for **weekly synthesis, escalation and leadership decisions**.

3. Recurring report cadence, format and channel

3.1 Why a weekly VP report?

A weekly cadence balances operational signal with leadership attention: daily reporting would create unnecessary noise, while monthly reporting would delay intervention.

3.2 Why Monday morning?

Monday provides a clean prior-week signal before the new week's operating decisions are locked in.

3.3 Why PDF/email?

PDF provides a stable, forwardable record while email fits the existing leadership communication workflow. The email delivers the executive scan; the PDF preserves supporting evidence for investigation. The live dashboard remains the operational source for interactive drill-down.

4. Design & Theming

The visual theme and typography of these reports take direct inspiration from the Linemate website and the original Task 1 brief document. This includes the use of the signature coral-orange accent color, the clean sans-serif typography, and a subtle grid background to seamlessly align the analytical deliverables with Linemate's core brand identity.
