Education

Bachelor of Arts (Majors in Psychology) | IGNOU
2018 – 2022

BS Degree in Data Science and Applications | IIT Madras
2026 – pursuing

Certifications

 AWS Certified AI Practitioner (AIF-C01)

 AWS Certified Cloud Practitioner (CLF-C02)

 Microsoft Power BI Data Analyst Certificate by Microsoft

 Google IT Support Professional Certificate by Google (Coursera)

 Atlassian IT Service Management (ITSM) Professional Certificate

 Atlassian Agile Project Management Professional Certificate

 ServiceNow IT Leadership Professional Certificate

Objective

AI Engineer with a Data Science background and 3+ years of enterprise experience translating business needs into analytics solutions. Skilled in SQL, Power BI, Python, and AWS. Passionate about leveraging AI and intelligent automation to solve complex business challenges.

Experience

JUNE 2026 – Present

Data Scientist Intern | Tera Global Enterprises

-  Analyzed and processed structured and unstructured data to extract actionable insights.
-  Built and maintained data pipelines for data collection, preprocessing, and transformation using PySpark.
-  Performed data cleaning, feature engineering, and exploratory data analysis (EDA) to improve data quality.

JUNE 2024 – June 2026

Service Advisor | Call BA – Subsidiary of British Airways

-  Provided L2 technical and functional support for ticketing, reissues, and fare rule validation using Amadeus GDS.
-  Managed the end-to-end PNR lifecycle in Amadeus—including creation, fare pricing, ticketing, reissues, and refunds—while strictly adhering to data privacy and security frameworks for sensitive customer information.
-  Developed and maintained Power BI dashboards to visualize ticketing reissue trends, fare rule validation failures, and customer PNR data anomalies, enabling proactive identification of recurring system issues and reducing average handling time.

NOVEMBER 2022 – MAY 2024

Senior Technical Analyst | Ienergizer IT Services Private Limited

-  Managed and resolved Level 2 B2B technical support tickets, consistently meeting internal SLAs and ensuring high customer satisfaction.
-  Troubleshoot application workflows and production incidents by analyzing system logs and executing SQL database queries to identify data discrepancies
-  Conducted Root Cause Analysis (RCA) on recurring software defects, collaborating with cross-functional engineering teams to deploy sustainable fixes.

- Utilized Looker to analyze production incident logs and SQL query outputs, creating shared data views that helped engineering teams visualize recurring defects and prioritize root cause analysis (RCA) efforts.

Projects

LLM Concepts RAG System | Elasticsearch, Streamlit, Docker, Groq and OpenAI

[<https://github.com/beingAnujChaudhary/ml-concepts-rag>]

- Advanced Retrieval-Augmented Generation for Machine Learning Education
- An end-to-end RAG application that answers ML questions using hybrid search (BM25 + Vector) and cross-encoder reranking.
- It features dual-LLM fallback (Groq & OpenAI), dynamic Mermaid diagram generation for visual learning, and a fully Dockerized architecture with PostgreSQL & Grafana for monitoring interactions.

Spice Route Kitchens — Operational Analysis & Dashboards | Looker Studio, Python, Data Analysis |

[<https://github.com/beingAnujChaudhary/portfolio-beingAnujChaudhary/tree/main/projects/SD%26IA>]

- Operational analysis project providing actionable insights for Area Managers and VP Operations.
- Built a live, interactive Looker Studio dashboard to monitor scheduled-work completion, compliance, and ticket backlog, featuring drill-down capabilities for daily monitoring.
- Developed automated weekly briefing reports for VP Operations focusing on recurring outlet underperformance and ageing ticket backlog to drive targeted management action.

SaarthiEO — Disaster Detection from Satellite & Drone Imagery | Python, PyTorch, Gradio, Hugging Face |

[<https://huggingface.co/spaces/beingAnujChaudhary/SaarthiEO-Disaster-Detection>]

- Fine-tuned EfficientNet-B3 on a 4-class aerial disaster dataset achieving 97.38% test accuracy (Fire, Flood, Collapsed Building, Traffic Incident).
- Built an end-to-end Grad-CAM explainability pipeline hooking the last convolutional block to produce interpretable attention heatmaps.
- Deployed a production-grade 3-tab Gradio web app (single predict, Grad-CAM, batch CSV export) to Hugging Face spaces with Git LFS model storage.

Customer Churn Prediction & Retention Prioritization | Python, XGBoost, SHAP, Power BI |

[<https://github.com/beingAnujChaudhary/Customer-Churn-Prediction-Retention-Prioritization>]

- Focus: Churn prediction, A/B testing, behavioral segmentation for proactive customer retention
- Built churn prediction model (XGBoost, 87% AUC) using transactional and behavioral features from 10K+ credit card customers
- Applied SHAP values to identify top 5 churn drivers (e.g., declining transaction frequency, product disengagement); created risk-based prioritization tiers (High/Medium/Low) for targeted interventions
- Developed Power BI dashboard enabling sales teams to filter at-risk accounts by value tier, supporting proactive retention workflows

Key Skills

- Programming:** Python (NumPy, Pandas, Scikit-learn, XGBoost, SHAP), SQL
- Data analysis & visualisation:** Power BI (DAX, interactive dashboards), Matplotlib, exploratory data analysis (EDA), feature engineering
- Statistics:** Hypothesis testing, A/B testing, regression, classification, clustering, power analysis, RFM analysis
- Tools:** Git, GitHub, Jupyter Notebook, Amadeus GDS, Salesforce, Zendesk, Jira (Atlassian)
